## Drive Down IT Operational Costs...

... with  
**BakerWatch™ Real-Time Monitoring**

"BakerWatch is essential for the Kingspan Group. It allows us to focus on growing our business and at the same time helps reduce our IT costs."

*Danny Jenkins - IT Infrastructure Manager, Kingspan Group PLC*

**Secure Real-Time Proactive Monitoring for Your  
Business Network.**

## Avoid the Pain of Downtime

Downtime results in lost revenue, dissatisfied customers and frustrated users. With **BakerWatch™** you can identify IT problems and deal with them before they impact on business operations. By monitoring your network in **real-time**, BakerWatch™ provides an instant insight into the status, performance and utilization on network nodes across your local and wide area networks. Our team of highly trained network infrastructure engineers can proactively identify possible problems. They are on hand **24 X 7** to alert you to take corrective action to maximize availability and ensure smooth operations.

## Low Cost Reliable IT Services

Your network and the critical applications you use are vital to the operation and success of your business — if they stop, business stops. As technologies grow more complex, supporting IT systems with a small budget represents a considerable challenge for small to medium size businesses. You constantly need to protect your company from costly downtime, security threats and unseen activities that suck up valuable network resources. **BakerWatch™** is a hosted real-time solution from Baker Security and Networks that provides proactive surveillance and **continuous monitoring** of your network to ensure that your business is running smoothly and efficiently at all times. BakerWatch™ and our **Network Operations Centre** team deliver a cost effective Enterprise-Class support solution allowing you to focus on running your business.

## Health Checks

BakerWatch™ delivers ongoing, real-time **graphic reports** of how applications, network devices and individuals are impacting your valuable network resources. Reports on your email server, web server, Databases, Firewall, Anti-Virus, Internet performance and network bandwidth will help to increase uptime, right-size your infrastructure and deliver a return on your IT infrastructure investment.

## Trusted Security

Baker Security & Networks is recognised as the leading IP security experts. We have been managing networks in Financial Organisations, Government and State agencies, National and International Corporations for the past 11 years. Access to your network is limited to a technical account manager in our professionally staffed Network Operations Centre. We have employed industry best practices to ensure that your data and identity remain private and secure. BakerWatch™ also ensures privacy and security of your monitored data by building a VPN tunnel direct to your network from our Network Operations Centre. **Your network is safe** in our hands.

## Rapid Deployment

With no capital investment in hardware or software, no time investment in product training, BakerWatch™ **saves you time and money**. Set-up and configuration happen at our Network Operations Centre so there is **no interruption** to your day-to-day business activities and no costly installation fees.

**BakerWatch™ Low Cost Of Ownership and Easy on your Budget.**
